

## PROFESSIONAL SUMMARY

Professional with rigorous training in CEH and CCNA, possessing a strong foundation in offensive security, vulnerability assessment, and penetration testing methodologies. Proven expertise in identifying, exploiting, and documenting security weaknesses across networks and IoT devices. Adept at conducting rigorous security assessments, performing deep-dive vulnerability research, and developing custom tools to enhance security posture. Seeking a role in SOC or VAPT to apply technical research and analysis skills in protecting enterprise environments.

## TECHNICAL EXPERIENCE & SECURITY RESEARCH

### Security Researcher & Tool Developer

OCT 2023 – PRESENT

#### Independent Research & Open Source Contributions

- IoT Vulnerability Research (BlueDucky):** Utilized the BlueDucky framework to automate the identification and exploitation of unauthenticated Bluetooth peering vulnerabilities (CVE-2023-45866), demonstrating keystroke injection risks on Android/Linux.
- Network Traffic Anomaly Detector:** Engineered a real-time analyzer using **Scapy** to detect SYN floods and clear-text credential transmission by performing deep packet inspection on TCP/IP headers.
- WikiCrawler (OSINT Automation):** Built a reconnaissance tool using Bi-directional BFS and **Gemini AI** for entity relationship mapping and context-aware link investigation.
- Endpoint Security Simulation:** Developed a controlled keylogger and exfiltration simulator to demonstrate C2 communication patterns and endpoint security risks for behavioral analysis study.

### Vulnerability Assessment & Penetration Testing (VAPT)

#### TECHNICAL IMPLEMENTATION

#### Security Operations & Simulation Labs

- Performed end-to-end penetration testing simulations, including reconnaissance, scanning, enumeration, exploitation, and post-exploitation analysis across various network topologies.
- Utilized **Nmap**, **Metasploit**, **Burp Suite Pro**, and **Hydra** to identify and exploit vulnerabilities in web applications and network services.
- Assessed web applications against **OWASP Top 10**, identifying critical flaws such as SQL Injection, XSS, and broken authentication.
- Prepared comprehensive security reports documenting findings, risk severity, exploitation paths, and actionable remediation strategies.

## TECHNICAL ARSENAL

### Security & Exploitation

VAPT Methodologies

Metasploit / Burp Pro

CVE Research

Wireless Security

Red Teaming Basics

### Analysis & Recon

Nmap / Wireshark

OSINT Automation

Traffic Analysis

Log Analysis

### Development & Ops

Python (Security Tooling)

Bash / Linux Internals

Docker / Virtualization

Git / CI/CD Basics

## EDUCATION

### B.Sc. Computer Science

NES Ratnam College

Graduated: Oct 2024

**Relevant Coursework:** Network Security, Cryptography, Cyber Forensics, Operating Systems, DBMS

## PROFESSIONAL TRAINING

### CEH Training

Connecting Cyber Networks

### CCNA Training

Connecting Cyber Networks

## LANGUAGES

English

Hindi

Marathi
